

# Help us create more learning moments that matter.

Our STEM programs enhance classroom learning and inspire minds as young as PreK.

Pearl, a California round ray (stingray), helps us engage children and families in marine science.

Our events invite the community to take part in STEM competitions and collaborative projects.

We are the area's only 501(c)(3) organization of its kind, and this year, we need your support more than ever.

## Discovery Space & The Rivet

Please join us in our mission to engage kids and adults in meaningful learning experiences that are FUN!

Afterschool programs and internships introduce kids in grades 4-12 to science careers & the trades.

Adults and retirees continue their learning, explore new passions, and make new friends.

Kids and adults build confidence and job skills through workforce development programs.
